

MARINE CERTIFIED LABEL MATERIALS

BS5609 is a recognized standard for self-adhesive labels for marine use. It contains provisions to ensure that dangerous goods transported by sea should be durably labelled and identified. This includes surviving immersion at sea.

Labeling a smarter future
beyond fossils

brand at upmraflatac.com

Section 2

Section two details the requirements for pressure sensitive adhesive laminates and rates their performance in terms of dimensional stability, adhesion, artificial weathering, temperature cycling and colour fastness together with exposure to marine conditions for three months. It is the responsibility of the label printer to ensure that the printed labels comply with section 2 of BS5609.

Section 3

Section 3 contains the performance requirements for printed pressure sensitive adhesive labels. It is the responsibility of the label printer to ensure that the printed labels comply with section 3 of BS5609. This category includes the printing inks, ribbons and systems applied to materials certified in Section 2. The printed labels in Section 3 are thoroughly tested for print permanence, abrasion resistance and the effects of different weather conditions such as sand, salt spray and light.
