

## Xeikon digital printing with UPM Raflatac

Digital printing means shorter label runs and fast deliveries of premium labels to the end-user. Almost any labelling application can benefit from the flexibility of digital printing. With growth in the digital market set to continue, converters printing digitally alongside conventional press methods answer a rising demand for shorter runs.

The Xeikon process uses electrophotography followed by heat fusion, and this places tough demands on the labelstock. Good heat resistance, sufficient smoothness, and optimal and uniform electrical properties are essential. Xeikon products from UPM Raflatac have been specially developed to meet the exacting requirements of this technology to produce the highest quality print result.

# THE XEIKON DIGITAL PRODUCT RANGE BY UPM RAFLATAC

7/2010 ENG 1108/3

UPM Raflatac offers an extensive range of products for Xeikon-based printing. The consistent quality, optimized moisture levels and electrical properties of these products assure excellent printability for high-quality printed labels. Adhesive-free edges prevent bleeding and reduce machine cleaning and maintenance. UPM Raflatac also supplies tailor-made digital solutions for special needs.

<b>EAN code</b>	<b>Combination</b>	<b>Sales code</b>
165308	Raflabrite DL RH 1 HG65	UZRH0103E0
191871	PP Solid White TC DL 60 RP 37 HD70	YURP3728E0

The above products are available ex-stock with 330 mm pattern gumming.  
Minimum order size: 1000 m<sup>2</sup>.
