

Sustainable at the source: FSC™ CERTIFIED PAPER FACE AND LINER MATERIALS

Many of the biggest, most iconic global brands have announced ambitious sustainability targets for their packaging materials. These targets often mandate paper products sourced exclusively from certified sustainably managed forests.

The mark of
responsible forestry

Our portfolio of FSC™ certified products can help you achieve those targets. Together, we can label a smarter future beyond fossils.

What is FSC?

FSC certification by the Forest Stewardship Council™ is an internationally recognized mark of well-managed forest operations. This third-party, non-governmental organization serves to promote and uphold best practices for responsible forest management. Forest certification promotes good governance and helps combat deforestation and illegal logging.

The forest certification process is designed to provide independent verification for buyers and users of forest-based products. These certifications ensure that the wood raw material used in products is legally sourced and originates from sustainably managed forests.

But with only about 10 percent of the world's forests certified by FSC and other programs, much work is still to be done. UPM Raflatac has supplied FSC certified products since 2008 and actively co-operates with the organization around the world. More info: ic.fsc.org

Labeling a smarter future
