

# Service options with UPM Raflatac APAC

UPM Raflatac offers a full spectrum of service options to fulfil all your business requirements. We meet your needs for speed, high volumes, cost control and production efficiency.

Whichever of our service options supports your business best, we offer a unique combination of world-class manufacturing expertise and the industry benchmark in customer service.

## **Coater**

Products laminated on demand from our coaters extend the options available from our stock range. Minimum orders are pre-defined depending on the combination of face, adhesive and liner, and may also vary according to the product width and manufacturing site.

## **Net Width**

Customers specify the roll widths they need for individual and multiple rolls. Net Width products are supplied in pre-defined lengths. Because rolls are supplied in the precise widths needed, customers save on waste and make efficient use of the material to control their costs.

## **Pre-defined**

Customers can order cut-to-size products that are supplied in pre-defined widths. (Only available in Australia and New Zealand.)

## **Standard**

Products are stocked ready and supplied at full trim, and may vary according to the product width and manufacturing site.

For all enquires, assistance and support, your UPM Raflatac sales contact is ready to help.
